

Country	Product Type	Product	Function	Regulator Request / Comment	Response	Response Date
Australia	Formulation	All Formulations	Dossier Prep	The data list errors within the environment, and efficacy and crop safety sections need to be amended. An updated data list required	An updated data list will be submitted.	30-Sep-11
Australia	Formulation	100 SE	Ecotox	We have been notified that additional pollinator studies will be provided for this product and the active constituent. However, no date has been provided. As with all products awaiting data (timeshift) a date by which the additional data is to be provided by must be supplied. Please provide a date of when we can expect the pollinator studies.	The EU bee studies and the risk assessment position paper (DuPont-31516) were included in the Annex II dossier.	na
EU	Formulation	100 OD	E-Fate	For the 100 OD formulation, we could not locate modelling of the proposed bean use. We are unsure whether this crop can be considered to be covered by the tomato simulations, or whether it would be preferable to run separate simulations based on the field bean crop within the FOCUS framework for completeness. It would be useful if this could be clarified.	Modelling will be done if the use is not covered by another crop scenario.	15-Dec-11
EU	Formulation	100 SE	E-Fate	For the 100 SE formulation, we could not locate any exposure assessments in surface water or groundwater for the proposed olive uses. Since this crop is included in the FOCUS framework, it may be appropriate to include specific consideration of this crop as you have done for other crop groups.	Modelling will be done if the use is not covered by another crop scenario.	15-Dec-11
Australia	Formulation	100 OD	Efficacy	We have been notified that efficacy and crop safety data will be provided for this product. However, no date has been provided. As with all products awaiting data (timeshift) a date by which the additional data is to be provided by must be supplied. Please provide a date of when we can expect the efficacy and crop safety data.	The efficacy and crop safety data will be provided.	14-Oct-11
Canada	Formulation	All Formulations	Efficacy	(see original PMRA document)	Information will be provided.	30-Sep-11
EU	Formulation	All Formulations	EU Classification	Operator Exposure: The implications of classification and labelling are not discussed.	A discussion on the implications of classification and labelling will be provided.	15-Dec-11
Canada	Formulation	200 SC	Operator Exposure	(see original PMRA document - potato use)	DuPont will provide proof of access to an existing PMRA-reviewed exposure study.	30-Nov-11
